

How Eagle Film raises the bar on quality.

Len Fouty and David Kraai of Walker, Michigan decided to raise the bar by providing the finest monolayer film in the world. They knew that to fulfill their mission, they'd need to bring together the best people and the finest equipment available. That's why they chose a new W&H VAREX® monolayer blown film extrusion line with OPTIFIL® P2 auto gauge control. They call their new venture Eagle Film Extruders; their customers call it fantastic.

W&H helps Eagle produce the highest quality polyethylene films for the printing, laminating, and bag converting markets. The line can produce tubing and sheeting up to 63" wide layflat widths, and includes W&H's OPTIFIL® P2 automatic die control with a capacitive thickness gauge, multiple component gravimetric control, Module ISP for integrated quality control, and oscillating haul-off, and a FILMATIC®K winder with face-to-face roll orientation.

Eagle will continue to raise the bar. And W&H will be flying right alongside.

Eagle Film Extruders' Len Fouty and David Kraai with their W&H VAREX®.
