

How Huntsman Packaging doubled its edge in high-barrier films.

When films started coming off the W&H VAREX® five-layer blown film system at Huntsman Packaging, the plant manager knew he was looking at more than the highest-quality high-barrier films in the industry. Sonny Woodbridge was looking at a big competitive edge.

He saw that the high-tech VAREX® with the OPTIFIL® P-2 automatic die was not only producing virtually flawless films with minimal thickness variation. It was also producing thinner films, using less material and cutting expensive waste. Huntsman could now offer the highest-quality, most sophisticated protective food packaging films at a very competitive price.

When customer demands soared, Huntsman acted, doubling its capacity—and its competitive edge—with a second VAREX® OPTIFIL® P-2 system. Now two innovative new VAREX® modules are taking quality to an even higher level. NOSTIC's® air-cushioned turn bars eliminate bar/film contact and prevent scratching. The MODULE K-Beta non-contact gauge reading does away with marks and blemishes.

Whatever you process, a state-of-the-art VAREX® system will give you a significant competitive edge in your target markets. You need buy only one, of course. But when you see the unbeatable quality and growing customer demands, you may want to do what Huntsman Packaging did. Get in touch with Windmoeller & Hoelscher.

The computer-controlled OPTIFIL® P-2 automatic die delivers the industry's lowest point-to-point gauge variation.
