

How ISO Poly Films Shows Its Passion

ISO Poly Films has a passion for giving its customers the best polyolefin films possible. So when ISO president Jon McClure wanted state-of-the-art equipment, his choice was clear: a Windmoeller & Hoelscher 3-layer VAREX® blown film system.

Jon McClure wants virtually flawless films with minimal thickness variation, and his VAREX® with the automatic OPTIFIL® P-2 die delivers. The innovative Module ISP is the ultimate in quality control. And the patented NOSTIC® air-cushioned turning bars make scratching or marking of the film a problem of the past.

To make sure his customers get only the best, Jon chose the best. His VAREX® line has quality features such as a capacitive thickness gauge that accurately measures the thinnest film for automatic precision gauge control. His package also includes a multiple component gravimetric control system, Module R product information storage, and a bubble stabilizing cage with ultra-sonic bubble size control. Add in a 130" FILMATIC® M dual center surface gap winder, and you'll understand why Jon McClure chose W&H.

Call Windmoeller & Hoelscher today. We can give you -- and your customers -- something to be passionate about.

The industry's only automatic die: the OPTIFIL® P-2
