

VAREX® a Safe Bet for Nelmar Security Packaging

Nelmar Security Packaging Systems Inc. of Terrebonne, Canada manufactures patented tamper-evident systems for the safe transfer of currency, checks and other valuables. Since 1987, Nelmar has been a global provider of security packaging products to major banks and retailers, medical institutions, restaurants, and casinos.

The 3-layer VAREX® purchase represents Nelmar's first extrusion line. With a working width of 71" (1800mm), the OPTIFIL® P3 gauge profile control system for high-output lines, and W&H's FILMATIC® S dual surface winder, this line has secured Nelmar's ability to handle current and future growth. "We decided on the W&H line due to many factors," states Neil Freder, Nelmar's President, "homogeneity of the film produced with our recipe was one, and the maximum output guarantees enable us to achieve the greatest return on our investment with this line."

You can bank on improved output and the highest quality product when you select W&H. The VAREX® modular Blown Film System, for monolayer and co-extrusion, can be perfectly tailored to specific requirements and expanded to cover an ever growing spectrum of applications. Contact us to learn more about our complete line of extrusion, printing and converting equipment.
