

# Next Generation Films Takes the Next Step.

Since 1993, David Frecka and his team have been building Next Generation Films of Lexington, Ohio into a major presence in the three-layer blown film market. They've carved quite a niche as a trusted supplier of specialty film to the food packaging, automotive, courier, manufactured housing, and protective packaging industries.

Recently, Next Generation took the next step by adding a 7th line to conquer food shrink-wrapping and multi-layered wrapping for the automotive industry. With the purchase of their new 103" wide W&H 3-layer VAREX® line with OPTIFIL® P-2, they've moved to wider widths and extreme quality and consistency. Next Generation's new W&H line includes an oscillating haul-off with the patented NOSTIC® package for tacky films, multiple component gravimetric control systems, and a 103" wide FILMATIC® M dual center/surface gap winder.

Next Generation anticipates significant growth this year. And W&H will be right there beside them.
